

ExpenseCheck Assignment

The aim of the task is to find out how you think about setting up, building and executing a project.

Project Requirements:

- The code should be hosted on a public repository on git{hub|lab}
- The final application should be deployed using “Pages”
- A `readme` needs be provided to explain:
 - How to build/run the application
 - How to run the tests (if present)
 - The guidelines to write new code
- **Design:** The UI mockups are only indicative you can improve the UI as you wish
- The movie database to use as api service is: <https://www.themoviedb.org>
- Please do not add references to ExpenseCheck in the project

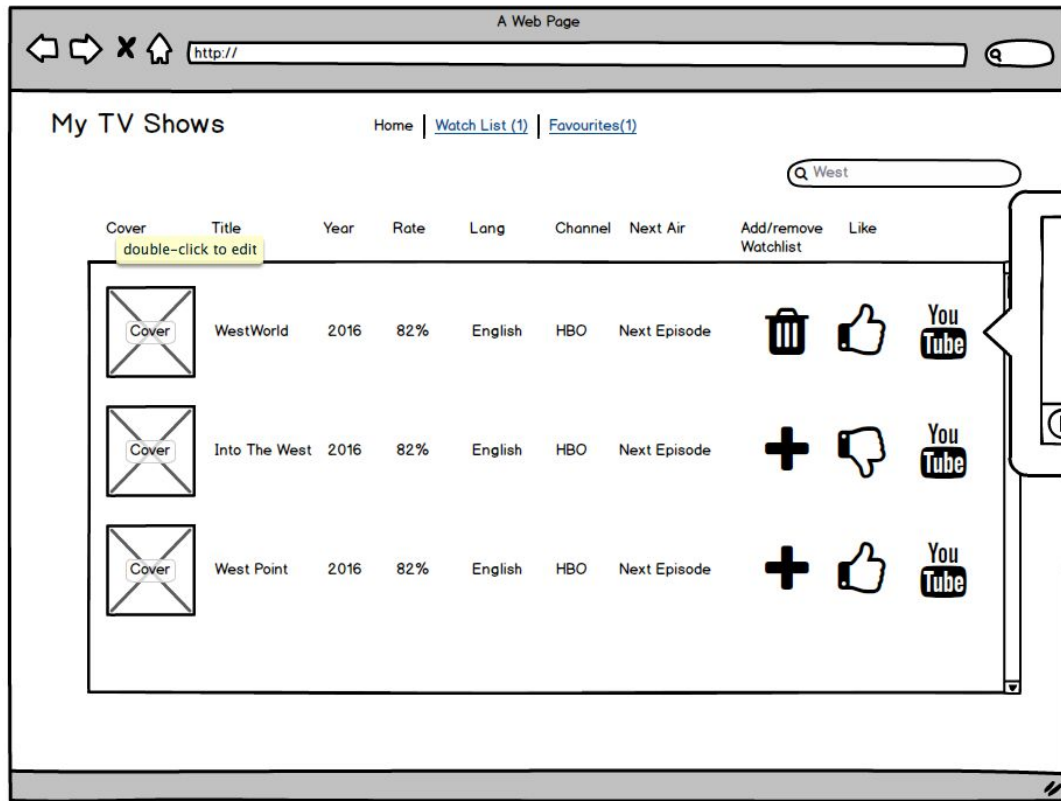

Technical requirements:

- You can use ES5/ES6/Typescript
- **React**
- Feel free to use any library you think it's necessary to complete the assignment
- Only frontend code.
- The app must be compatible with the last version of the major browsers (Firefox/Chrome/Safari)

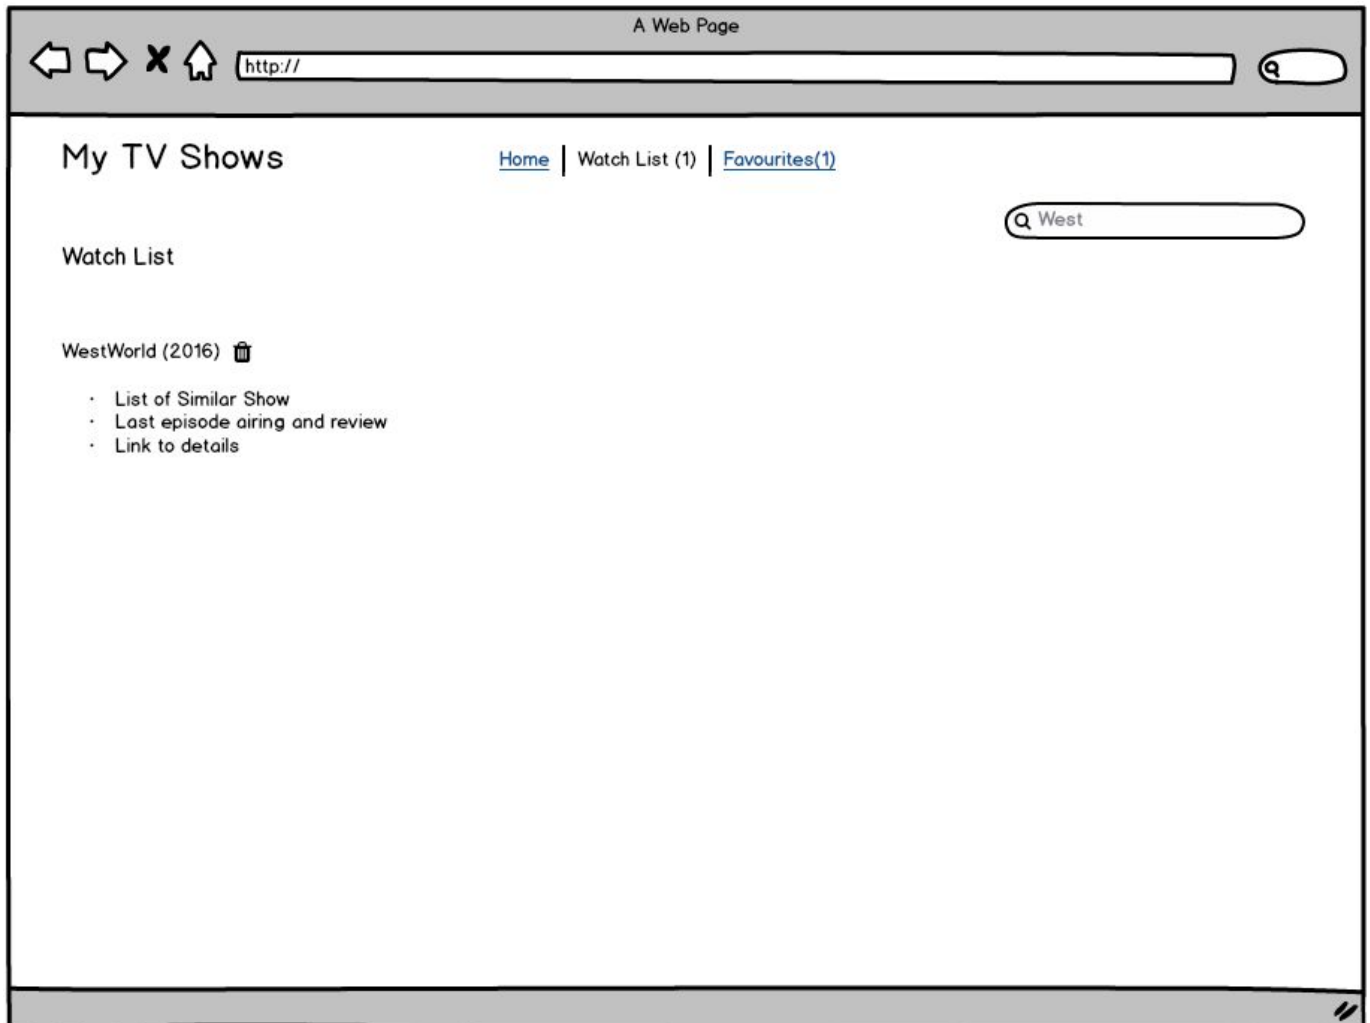

Optional:

- Make the store of the movie in the lists persistent after the browser is closed
- Add the youtube trailer preview
